

base B-smilla!
B = $\begin{pmatrix} v_1 & v_2 \end{pmatrix}$ $v_1 = R \cdot e_1$, $v_2 = R \cdot e_2$

$$A = \begin{pmatrix} a & b \\ b & c \end{pmatrix}$$

A je symetrická

$G_B = \begin{pmatrix} \langle v_1, v_1 \rangle & \langle v_1, v_2 \rangle \\ \langle v_2, v_1 \rangle & \langle v_2, v_2 \rangle \end{pmatrix} = R^T A R$

$$(\cos \varphi \quad \sin \varphi) \cdot \begin{pmatrix} a & b \\ b & c \end{pmatrix} \cdot \begin{pmatrix} -\sin \varphi \\ \cos \varphi \end{pmatrix} = (\cos \varphi \quad \sin \varphi) \cdot \begin{pmatrix} -a \sin \varphi + b \cos \varphi \\ -b \sin \varphi + c \cos \varphi \end{pmatrix}$$

$$\langle v_1, v_2 \rangle = b(\cos^2 \varphi - \sin^2 \varphi) + (c-a) \sin \varphi \cos \varphi \stackrel{!}{=} 0$$

$$b. \cos 2\gamma + \frac{c-a}{2} \sin 2\gamma = 0$$

dz 2? = $\frac{2B}{a \cdot c}$, schon! viel mehr
